

Flu prevention may be more important than ever this year

Reduce your flu risk with a flu shot

Flu season is right around the corner, and this year's may be unprecedented. Because of the ongoing COVID-19 pandemic, health care experts are sounding the alarm on the importance of protecting against the flu.¹

When it comes to the flu, there's no better way to defend yourself, your family, and your community than by making sure you receive a flu shot.

The benefits of the flu shot

Each year, millions of people — around 8% of the U.S. population² — become sick with the flu. The flu shot can help:

- **Keep you healthy.** The flu shot has helped prevent:³
 - 4.4 million illnesses
 - 2.3 million medical visits
 - 58,000 hospitalizations
 - 3,500 deaths
- **Lessen the impact from COVID-19.** Becoming sick with the flu can leave you vulnerable to a more serious case of COVID-19, leading to a potential overburdening of national health care systems.¹
- **Prevent complications in people with chronic conditions.** The flu vaccine can reduce hospitalizations for people with diabetes and chronic lung conditions, and help lower the rate of cardiac events.³
- **Reduce how sick you become.** A flu shot can help decrease your risk of becoming ill with the flu by as much as 60%, and can help reduce the severity of the virus if you do become ill.
- **Protect the people around you,** including those who are at a higher risk for illness, such as babies, young children, older adults, and those with chronic health conditions.

- **Prevention⁴.** While having a flu shot is the best prevention against the flu, here are additional tips:
 - Clean shared surfaces. Wipe down items such as telephones, keyboards, steering wheels, and doorknobs often.
 - Avoid close contact with those who are sick. This will help to reduce the chance of becoming infected and sick.
 - Wash your hands often and direct your sneeze or cough to your upper sleeve.
 - Avoid touching your eyes, nose, and mouth.

Protect yourself from the flu
