## **International Holocaust Remembrance Day**

### January 27, 2024

### Smithsonian United States Holocaust Memorial Museum Resources

#### **CVUSD** Resolution

#### CONEJO VALLEY UNIFIED SCHOOL DISTRICT

RESOLUTION #23/24-17 IN SUPPORT OF INTERNATIONAL HOLOCAUST REMEMBRANCE DAY JANUARY 27, 2024

WHEREAS, the Holocant was the state-sponsored, systematic perscustion and annihilation of European Jewy by Naci Germany and its collaborators between 1933 and 1943. Jews were the primary victims—six million were mundered; Roma and Sinti (Gypsies), people with mental and physical disabilities, and Poles were also targeted for destatuction or decimation for reads, efficie, or national reasons. Millions more, including hemosexuals, Jehovah's Witnesses, Soviet princers of war, and political disadents, also suffered grievous oppression and dash under Naci Germany; and

WHEREAS, through our Day of Remembrance events, Conejo Valley Unified School District seeks to commemorate this tragic history and reflect on the lessons it holds for our lives today. We also pay tribute to the rescuers who risked their lives to save others during the Holocaust and to the American soldiers who liberated the concentration camps; and

WHEREAS, "It's not enough to curse the darkness of the past. We have to illuminate the future," explains Holocaust surviver Estelle Laughlin. "On Days of Remembrance, the most important thing to remember is the humanity that is in all of us to leave the world better for our children and for posterity,", and

WHEREAS, International Holocaust Remembrance Day has been set aside for the people of the Conejo Valley Unified School District to remember the victims of the Holocaust as well as to reflect upon their own humanity and the need for respect of all peoples; and

NOW, TUREFEORE, BE IT RESOLVED that the Genorming Board of the Conginy Valley Unifed Shool Datiety providenti January 72, 2023, to International Holescante Remembrance Day in its schools in memory of the vicinus, the survives, and their liberators and further proclaims that we realfflm our commitment to combating the rise of antisemilian and hard around the world and aris to overcome intolerance and indifference through learning and remembrance while being respectival blocknuss survivous and vicinus, and their and frequence of the survivous survivous

Clerk, Board of Education

Mimic an Ecosystem: Design Wildlife Crossing for Cougars

## Ms. Kristin Nordstrom Teacher at Ladera STARS Academy

## Wildlife Crossings

## Life Science

## **Project-Based Learning**

Students investigate their local ecosystem. They learn the science and engineering behind wildlife crossings and design their own crossings to help mountain lions.

PBL written by: Kristen Nordstrom Email: knordstrom@conejousd.org

## Ladera STARS Academy

Our STEAM magnet school was nationally STEM certified in 2022. This STEM professional development program was developed at Rice University. It is part of a rigorous year-long campus certification process. The Ladera STEAM team worked closely with a coach provided by the National Institute for STEM Education. This team presented evidence of data analysis and created an action plan to sustain the school's forward momentum. NISE STEM certificates integrate the most recent research and best practices in STEM, 21st century learning, and professional development. We currently have 8 full-time teachers who are nationally STEM certified. On average, it took 40-70 hours per teacher to complete the certification with the National Institute for STEM Education.

We continue to develop as a staff together and attend conferences, STEAM summer PD, and trainings which we share with one another.

West Ed. Alliance STEAM in the Park STEAM Conf. CASE Conf. Buck Institute STEMposium.

## Investigating a Fragmented Ecosystem and Designing Solutions Lesson Overview

## 5E Model

- 1. ENGAGE Watch a mountain lion. Make observations and formulate questions.
- EXPLORE Create a class simulation of a mountain lion attempting to cross the freeway. What is the problem? How can we solve this problem? How can 2nd graders help a mountain lion?
- EXPLAIN Research our local ecosystem and how it functions. We form teams to research animals and native plants. We create Google slide presentations and write nonfiction books to teach other classmates.

- 4. EXPLAIN Learn about bridge building and create models of three different bridge structures.
- ELABORATE Apply our bridge building knowledge by designing, testing, redesigning, and retesting.
- 6. EVALUATE Present wildlife crossings to the class and discuss how your crossing held up during strength, earthquake, and tornado testing.

#### **NGSS Standards Table**

Connecting to the Next Generation Science Standards (NGSS Lead States 2013) The chart below shows NGSS and Common Core standards met in this PBL.

| Dimensions  | Classroom Connections  |  |  |  |  |
|---|--|--|--|--|--|
| <ul> <li>Science and Engineering Practices</li> <li>Asking questions and defining problems <ul> <li>Ask questions based on observations to find more information about the natural and/or designed world(s).</li> <li>Define a simple problem that can be solved through the development of a new or improved object or tool.</li> </ul> </li> <li>Planning and Carrying Out Investigations <ul> <li>Make observations (firsthand or from media) to collect data which can be used to make comparisons.</li> </ul> </li> <li>Developing and Using Models <ul> <li>Develop a simple model based on evidence to represent a proposed object or tool.</li> </ul> </li> </ul> | <ul> <li>Students make observations about<br/>ecosystems (natural world) and bridges<br/>(designed world) that lead to new questions<br/>and help them define the cougar/freeway<br/>problem.</li> <li>Students define the cougar/freeway problem<br/>and a plan for solving it by developing a land<br/>bridge.</li> <li>Students make observations first hand<br/>(campus field trip) and from media about the<br/>plants and animals that make up their local<br/>chaparral ecosystem and other ecosystems<br/>they compare it to.</li> <li>Students develop a model of the organism<br/>interactions in their local chaparral<br/>ecosystem and also develop models for their<br/>land bridges.</li> </ul> |  |  |  |  |
| <ul> <li>Analyze data from tests of an object or tool<br/>to determine if it works as intended.</li> </ul>  | • Students collect and analyze data about the effectiveness of their land bridge.  |  |  |  |  |

#### **Disciplinary Core Ideas**

#### LS4.D: Biodiversity and Humans

• There are many different kinds of living things in any area, and they exist in different places on land and in water.

#### **PS1.A: Structure and Properties of Matter**

• Different properties are suited to different purposes.

#### **ETS1.A: Defining and Delimiting Engineering Problems**

- A situation that people want to change or create can be approached as a problem to be solved through engineering. (K-2-ETS1-1)
- Asking questions, making observations, and gathering information are helpful in thinking about problems. (K-2-ETS1-1)
- Before beginning to design a solution, it is important to clearly understand the problem. (K-2-ETS1-1)

#### **ETS1.B: Developing Possible Solutions**

• Designs can be conveyed through sketches, drawings, or physical models. These representations are useful in communicating ideas for a problem's solutions to other people. (K-2-ETS1-2)

#### ETS1.C: Optimizing the Design Solution

 Because there is always more than one possible solution to a problem, it is useful to compare and test designs. (K-2-ETS1-3)

- Students survey the biodiversity of their local chaparral ecosystem and compare it to other ecosystems, including land and water ecosystems.
- Students study the materials used to build real bridges and test the properties of the recycled materials they use to construct their models of land bridges.
- Students solve the problem of cougars and freeways by considering an engineering solution that involves biomimicry.
- Students interview several experts and ask them questions that help them to better understand the problem. Students also make observations about the ecosystem when they go on a campus scavenger hunt and when they study media to help them gather information about mountain lions, ecosystems, and bridges.
- Students clearly define their problem during Part 1 of the unit and further refine it in Parts 2 and 3.
- Students design sketches of their land bridges and build physical models out of recycled materials.
- Students compare their designs with one another and test their designs using a class-generated rubric. They evaluate whether the design is on budget, sturdy, and accurately mimics the chaparral ecosystem. Students are also coached in how to provide and receive constructive feedback.

| Crosscutting Concepts Systems & System Models A system can be described in terms of its components and their interactions. Structure and Function The shape and stability of structures of natural and designed objects are related to their function(s). Cause and Effect | <ul> <li>Even though Systems and System Models was not officially one of the CCCs in the PEs for this unit, we used it as a unifying theme for the unit. Students studied ecosystems and bridge systems, and then mimicked their local ecosystem in their land bridge design.</li> <li>Students study the shape and stability of bridges in Part 2, including looking at the parts of a bridge (span, pier, and abutment) and their functions. Students expand their consideration of structure and function to include adding components of an ecosystem to their bridge design in Part 3.</li> </ul> |
|--|--|
| <ul> <li>Simple tests can be designed to gather evidence to support or refute</li></ul>  | <ul> <li>Students study causes of mountain lion fatalities and consider the</li></ul>  |
| student ideas about causes.  | potential effects of their design solutions.   |

Building Towards Performance Expectations (PE listing with clarification statement and assessment boundary)

- 2-LS4-1. Make observations of plants and animals to compare the diversity of life in different habitats. [Clarification Statement: Emphasis is on the diversity of living things in each of a variety of different habitats.] [Assessment Boundary: Assessment does not include specific animal and plant names in specific habitats.]
- 2-PS1-2. Analyze data obtained from testing different materials to determine which materials have the properties that are best suited for an intended purpose.\* [Clarification Statement: Examples of properties could include, strength, flexibility, hardness, texture, and absorbency.] [Assessment Boundary: Assessment of quantitative measurements is limited to length.]
- K-2-ETS1-1. Ask questions, make observations, and gather information about a situation people want to change to define a simple problem that can be solved through the development of a new or improved object or tool.
- K-2-ETS1-2. Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem.
- K-2-ETS1-3. Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs.

## Black-Tailed Deer DESIGNING

#### WILDLIFE CROSSINGS

A systems-thinking approach to learning about biomimicry

By Kristen Nordstrom and Kristin Majda

anine Benyus, founder of the Biomimicry Institute, reminds us that "we live in a competent universe, we live on a brilliant planet, and we are surrounded by genius" (Biomimicry Institute n.d.). Project-based learning tem (Biomimicry Institute n.d.). In this article, we present (PBL) that incorporates biomimicry helps students tap into this nature-inspired genius. By mimicking the structures,

36 · Science&Children · JULY/AUGUST 2023

processes, or systems found in the living world, students discover how to learn from nature and solve human problems in sustainable ways. Once students understand the concept of biomimicry of *structure*, which involves copying a form like the shape of a leaf or the feet of a gecko, they can progress to mimicking a system.

Biomimicry of a system involves copying the relationships that occur between a set of interacting biological structures, like the interactions of plants and animals within an ecosysour work developing a Project-based Learning (PBL) unit with Next Generation Science Standards (NGSS) instruc-

Please do not hesitate to reach out with any questions, insights, etc. I would love to hear from you!!

## Crossing Guards & Walk and Roll

**Grahame Watts**, Transit and Crossing Guard Program Administrator; **Alexandra South**, Director of Strategic Communications and Public Affairs; and **Nader Heydari**, City Engineer

Presentation, Questions and Discussion

City School Crossing Guard Program Overview

**DAC Committee Meeting** 

January 9, 2

Program Background

- Originally approved by City Council in 1964
- Currently includes 24 crossing guard intersections
- Supported by 1 Program Administrator, 2 part-time senior crossing guards, and appx. 30 part-time crossing guards
- City is managing the largest Crossing Guard program in Ventura County (and has highest overall cost of any City)

Program Details

- Over 400,000 pedestrians crossed annually
- Funded entirely by City (\$20,000 per site; \$500,000/year)
- Existing locations will not change until 2025-26 school year
- Recruiting guards to staff 24 sites is an ongoing challenge
- Safety of guards & pedestrians remains #1 program priority

Crossing Guard School Locations

- 1. Acacia Elementary
- 2. Aspen Elementary
- 3. Banyan Elementary
- 4. Colina Middle
- 5. Conejo Elementary
- 6. Cypress Elementary
- 7. Earths Elementary
- 8. Glenwood Elementary
- 9. Ladera Elementary #1
- 10. Ladera Elementary #2
- 11. Lang Ranch Elementary #1
- 12. Lang Ranch Elementary #2

13. Los Cerritos Middle 14. Madrona Elementary **15. Maple Elementary** 16. Meadows Arts Technology Elementary 17. Redwood Middle 18. Sequoia Middle 19. Sycamore Canyon #1 20. Sycamore Canyon #2 21. Sycamore Canyon #3 22. Weathersfield Elementary 23. Westlake Hills Elementary 24. Wildwood Elementary

Program Standards and Policy Adopted February 14, 2023

- A. Site evaluations are based on generous minimum qualification standards, including City specific criteria to address the unique circumstances
- B. Review of a site includes traffic volume, speed limit and road width considerations to provide for a lower threshold if necessary
- C. Sites recommended for closure have a one-year grace period and if a site fails to meet the minimum criteria, the recommendations for closure will not be implemented until the site has failed a second consecutive year
- D. A Professional Engineering firm conducts pedestrian and vehicle counts at each location, including any new locations requested to the City
- E. Annual Counts are compared against program standards, to determine if locations qualify for crossing guards

Minimum Count Standards

| Crossing Type  |               | Minimum Peak Hour<br>Volumes AM and PM |                 |  |  |
|--|---------------|--|-----------------|--|--|
|  |               | Vehicles                               | Pedestrians     |  |  |
| <b>Uncontrolled Intersection</b><br>no traffic control on higher volume<br>approaches (2-way stop) | State<br>City | 350<br><b>300</b>                      | 40<br><b>20</b> |  |  |
| All Way Stop Controlled<br>Stop control on all approaches  | State<br>City | 500<br><b>300</b>                      | 40<br><b>20</b> |  |  |
| Signalized Intersection*   | State<br>City | 500<br><b>500</b>                      | 40<br><b>40</b> |  |  |

\* Only signalized intersections are at Middle Schools and the Sycamore K-8 school

## Pedestrian and Vehicle Counting

- <u>Annual Counts</u> by 3rd party consultant at locations, Tuesday-Thursday (avoiding rainy days)
- <u>Count all pedestrians (grade K-8)</u> Includes children on skateboards, scooters, bicycles
- <u>Count all conflicting vehicles</u>
   Those vehicles that enter the crosswalk

## 2023 Count Locations that <u>Do</u> Meet Standards

| <b>SCHOOL</b>      | <b>INTERSECTION</b>         |

# Breakout Discussion Questions By School Clusters

1. What are some of the positive impacts of having crossing guards at school sites?

2. What are some of the barriers that keep kids from walking and biking to school? If there are site-specific barriers, what are they?

3. What are some potential ideas or solutions that might increase walking and biking to school?

### **Thousand Oaks**

 TOHS, Los Cerritos, Redwood, Acacia, Aspen, Glenwood, Ladera, Madrona, Weathersfield, Wildwood

#### **Newbury Park**

 NPHS, Sequoia, Sycamore Canyon, Banyan, Cypress, Madrona, Maple, Walnut

#### Westlake

• WHS, Colina, Los Cerritos, Acacia, Conejo, Glenwood, Ladera, Lang Ranch, Westlake, Westlake Hills
